PROFILE

Passionate fullstack developer with more than 6 years creating products and improving code skills. Friendly and open to work with other people around the world.

EMPLOYMENT HISTORY

Apr 2023 — Present

React Developer (Tods), Orienteed

A Coruña

I have extensively worked on adapting this application to cater to users with special accessibility needs. In order to comply with ADA standards, a comprehensive restructuring of the entire application was required. This involved modifying and updating all the necessary components to ensure adherence to the standard.

To manage state management efficiently, this application utilizes Redux along with a reducer to handle different states effectively. Additionally, I implemented Redux Saga as middleware to facilitate complex asynchronous operations and enhance the overall functionality of the application.

By implementing these changes and adhering to ADA standards, the application is now more inclusive and accessible to a wider range of users. The restructuring process and integration of Redux with Saga have resulted in a robust and user-friendly application, prioritizing accessibility and compliance with industry standards.

May 2023 — Present

React + HCL(Java), Oriented

A Coruña

I am currently working on a project for Dhal, a Finnish company specializing in e-commerce. My role involves assisting with various tasks related to continuous integration and continuous deployment (CI/CD), as well as resolving issues across different areas of the project. This includes working on the frontend of the application, configuring REST APIs, and collaborating on various aspects.

For the frontend development, I utilize React with functional components and custom hooks to create a dynamic and interactive user interface. Additionally, I employ Redux with Sagas to effectively manage state and handle complex asynchronous operations.

By leveraging these technologies and my expertise, I contribute to the successful development and improvement of the e-commerce application for Dhal. Whether it's implementing CI/CD processes, resolving issues, or enhancing different areas of the project, my goal is to ensure a seamless and efficient experience for both the company and its customers.

Sep 2022 — Apr 2023

React+ NodeJs Shopify Valido Integration, Orienteed

A Coruña

I have developed an application using Node.js, incorporating the latest versions of various technologies. For the front-end, I utilized React functions and employed Styled Components for CSS styling. To handle HTTP requests, I relied on Axios as the primary library. On the back-end, I utilized Express middleware to manage API requests. Furthermore, I leveraged GraphQL queries and mutations to consume data from MongoDB, which serves as the primary database.

For managing the global state of components, I chose to use the useContext hook instead of Redux. This decision was based on the fact that the complexity of the application did not necessitate the use of Redux and its associated boilerplate code. By utilizing the useContext hook, I was able to effectively handle the global state without adding unnecessary overhead.

Overall, this application demonstrates my proficiency in utilizing cutting-edge technologies such as Node.js, React, Styled Components, Axios, Express, GraphQL, and MongoDB to create a robust and efficient application.

Nov 2017 — Jul 2022

FullStack Developer TF7 (Java + JSP), Viewnext

Ourense

I worked as a Java developer and was responsible for developing all components of the system. This included working on the backend with Oracle and Spring MVC/Spring Batch architecture to create REST services, and on the frontend using JSP/JavaScript for the view.

EDUCATION

Sep 2009 — Jul 2011

Technological Bachelor, Ies Pedro Floriani

Redondela

I studied technology with a focus on mathematics and algorithmic problem-solving

Feb 2012 — Jul 2017

Degree in computer engineering, Universidad de Vigo

Ourense

I completed my university education here, where the focus was on software development and algorithms. I gained experience programming with Java, C++, React, MySQL, and PHP.

SKILLS	Communication Skills	Experienced	Apollo	Experienced
	Ability to Work Under Pressure	Expert	Express	Experienced
	Teamwork	Expert	GraphQL	Skillful
	Adaptability	Skillful	Java	Experienced
	Strong Leadership Skills	Expert	JavaScript	Experienced
	React	Skillful	NodeJS	Skillful

HOBBIES	I enjoy staying up-to-date with emerging technologies and have a passion for learning. In my free time, I like to read, listen to music, and exercise at the gym.
